## CHEAP SADDLE SOAP

---

I found a great recipe for a cheap saddle soap conditioner and I've been using it on all my tack! It's made my saddles and bridles almost water proof and it's a breeze to shine them up for an inspection. What you do is take 1 cup of whole milk and mix it with 1/4 of a glycerin saddle soap bar cut into small pieces (the smaller the better) heat it until it's melted then freeze it. It took about 5 minutes in-and-out of my microwave to get the bar to melt and 1 hour to freeze it, but now my black saddles reflect light and brown leather has become dark with rich colors. My leather is 10 times more supple and easier to work with and I don't have to condition as often. I just thought you might want to share this with everyone.
